ATS Report

Overall ATS Score: 82/100

The candidate's resume has a good balance of formatting, skills, projects, experience, education, and certifications. However, there are some areas that require improvement to increase the overall ATS score.

Section Scores

- * **Formatting:** 8/10 - The resume follows a clear structure, but there is no header image or relevant profile picture.
- * **Skills:** 9/10 - The skills section is comprehensive and well-organized. However, the use of emojis (e.g., "🔧") detracts from the overall professionalism of the resume.
- * **Projects:** 8.5/10 - The candidate has showcased two notable projects, but a more detailed description or metrics (e.g., "40% reduction in manual testing time") would strengthen this section.
- * **Experience:** 9/10 - The experience section is well-written and provides specific examples of job responsibilities and achievements.
- * **Education:** 8.5/10 - The education section is concise and easy to read, but a more detailed description of relevant coursework or specializations would be beneficial.

Resume Strengths

- * The candidate has a strong foundation in AI and machine learning, with experience working on multiple projects and tools (e.g., LangGraph, CrewAI).
- * The resume highlights specific achievements and responsibilities in previous roles.
- * The use of keywords like "Agentic AI," "Multi-Agent Orchestration," and "LLM Behavior Validation" demonstrates a strong understanding of the field.

Resume Weaknesses

- * The skills section could benefit from a more professional tone, as the use of emojis detracts from the overall presentation.
- * A more detailed description of relevant coursework or specializations in the education section would provide additional context for the candidate's background.
- * Some sections (e.g., experience) are concise but lack specific metrics or quantifiable achievements.

Missing Keywords

- * "Deep learning"
- * "Computer vision"
- * "Natural language processing"
- * "Robotics"

Missing Skills

- * Data science
- * Cloud computing
- * Cybersecurity

Suggestions to improve ATS score

1. Remove emojis from the skills section and replace with bullet points or a table format.

2. Include more detailed descriptions of relevant coursework or specializations in the education section.
3. Quantify achievements in experience sections (e.g., "Reduced manual testing time by 40%").
4. Consider adding a summary statement at the top of the resume to highlight key qualifications and experience.

****Final Verdict****

While the candidate's resume has a strong foundation, there are areas that require improvement to increase the overall ATS score. By addressing these weaknesses and incorporating additional keywords and skills, the candidate can improve their chances of passing through applicant tracking systems and landing an interview with potential employers.
