Executive Profile:

AI Engineer and Quality Specialist with a strong focus on Agentic AI — building smart, tool-using systems that actually work in the real world.

Currently at Ascendion Engineering, working on AI agent workflows — designing how agents think, which tools they use, and making sure they behave correctly at every step.

Built automation systems that cut manual testing by 40%. Hands-on with LangGraph, CrewAI, AutoGen, and OpenAI Agents SDK — and always learning more. Targeting AI Engineer roles where I can build and ship real agentic products.

Core Competencies

- ▶ Agentic AI Design & Testing
- ▶ Multi-Agent Orchestration
- ▶ LLM Behavior Validation
- ▶ Prompt Engineering
- ▶ AI Workflow Automation
- ▶ Test Automation (Web & Mobile)
- ▶ AI Quality Assurance

Technical Skills:

Agentic AI	OpenAI Agents SDK • LangGraph • CrewAI • AutoGen • Multi-Agent Systems
AI / LLM	Prompt Engineering • LLM Validation • Tool Creation • Guardrail Design • Edge-Case Testing
Test Automation	Selenium (Page Object Model) • PyTest • JUnit • Appium
Languages	Python • Java
Backend / APIs	Spring Boot • REST API • FastAPI
Database	MySQL
Tools & DevOps	Git • GitHub • Zoho Creator • Microsoft Excel

Professional Experience:

Ascendion Engineering Pvt. Ltd. | Bangalore, India

Associate Quality Engineer – AI & Automation

Jun 2025 – Present

Building and testing AI agent systems in production, while running automation across web and mobile platforms.

Key Contributions

- Played a key role in designing AI agent workflows on the AAVA platform — picking the right tools, setting up how agents make decisions, and putting safety checks in place so they don't go off-track.
- Took ownership of LLM testing efforts — finding edge cases, running adversarial prompts, and making sure AI outputs are accurate and consistent before they hit production.
- Built a clean, reusable Selenium + PyTest automation framework that cut manual testing by 40% across web and mobile apps.

- Ran quality checks on live AI workflows and flagged failure patterns early — saving time and preventing issues from reaching users.
- Worked closely with AI and product teams to agree on what good AI output looks like, and built test plans around those standards.

AI Projects & Highlights:

Agentic Workflow Design – AAVA Platform | Ascension

Designed and tested end-to-end AI agent pipelines that connect LLMs with real tools and APIs.

What I Did

- Set up agents to handle multi-step tasks automatically — from picking the right tool to completing the job without human input.
- Wrote guardrail rules to keep agents from doing unexpected things, especially in edge cases where LLMs tend to hallucinate.
- Tested over 200+ edge-case scenarios covering tool calls, prompt variations, and reasoning chains.

LLM Evaluation & Testing | AI Quality Engineering

Created a simple but thorough process for checking LLM responses in real-world settings.

What I Did

- Checked LLM outputs for accuracy, instruction-following, and how well they hold up across multi-turn conversations.
- Spotted common failure patterns in reasoning and shared findings with AI teams to improve model quality.

Education:

Rajalakshmi Engineering College, Chennai

B.Tech – Information Technology

2021 – 2025

CGPA: 7.50

KVS Matriculation Higher Secondary School, Virudhunagar

Senior Secondary (Class XII)

2019 – 2021

Silver Medalist – Overall Class 11

RJ Mantra English School, Virudhunagar

Secondary (Class X)

2019

Certifications:

- AI Engineer Agentic Track: The Complete Agent and MCP Course — Udemy
- Java Full Stack Development — Wipro
- Java Programming — Great Learning

Current Focus:

Right now, I'm deepening my skills in:

- Building multi-agent systems with LangGraph and CrewAI
- MCP (Model Context Protocol) server integration for agents
- Automated LLM evaluation and benchmarking methods
- Designing production-ready agentic applications end to end
